Noida, U.P. | pavnirastogi10@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

JSS Academy of Technical Education

Bachelor of Technology in Computer Science Engineering

CGPA: 7.1 / 10.0

2023 – 2027

Noida

Relevant Coursework: Database Management Systems (DBMS), Data Structures and Algorithms, Machine Learning, Statistics

TECHNICAL SKILLS

Languages: Python, SQL, C++

Databases: PostgreSQL, MySQL

Data Analysis: Exploratory Data Analysis (EDA), Data Cleaning, Feature Engineering, Statistical Analysis, Predictive Modeling, Customer Segmentation, Forecasting, KPI Reporting

Visualization & BI: Power BI, Streamlit, Microsoft Excel (Power Query, Pivot Tables, XLOOKUP), Matplotlib, Plotly

Libraries: Pandas, NumPy, Scikit-learn

Tools: Git, GitHub

PROJECTS

E-Commerce Product Growth Analytics | SQL, PostgreSQL, Python, Power BI

[GitHub](#)

- Built an end-to-end product analytics solution analyzing 2.76M+ e-commerce clickstream events using PostgreSQL, Python, and Power BI to evaluate customer behavior, conversion funnels, and product performance.
- Engineered SQL pipelines and behavioral metrics including funnel analysis, RFM segmentation, customer cohorts, and time-based KPIs to automate reporting and identify user engagement patterns.
- Identified a 2.69% View-to-Cart conversion rate as the primary conversion bottleneck and delivered interactive dashboards with data-driven recommendations to improve customer retention and conversion.

Bank Customer Churn Analytics & Prediction | Python, SQL, Scikit-learn, Power BI, Streamlit

[GitHub](#) | [Live App](#)

- Engineered an end-to-end customer churn analytics and predictive retention solution using SQL, Python, Scikit-learn, Power BI, and Streamlit to identify high-risk customers and support proactive retention strategies.
- Performed SQL-based business analysis, feature engineering, and comparative evaluation of Logistic Regression, Decision Tree, and Random Forest models, deploying the best-performing model with SHAP explainability for interpretable predictions.
- Built interactive Power BI dashboards and a Streamlit application to visualize churn drivers, customer risk segments, predictive insights, and personalized retention recommendations for business decision-making.

Supply Chain Analytics & Inventory Optimization | Python, SQL, PostgreSQL, Streamlit

[GitHub](#) | [Live App](#)

- Developed an end-to-end supply chain analytics solution using Python, PostgreSQL, and Streamlit to analyze 91K+ inventory records, monitor operational KPIs, and support inventory planning.
- Performed feature engineering, ABC/Pareto analysis, demand forecasting, inventory optimization, and warehouse-level performance analysis to identify stock imbalances and improve replenishment decisions.
- Developed an interactive Streamlit dashboard with dynamic filtering, KPI tracking, and scenario analysis, enabling real-time monitoring of revenue, profit, inventory health, and forecast performance.

Airline Campaign Performance & Customer Loyalty Analysis | Python, SQL, Power BI

[GitHub](#)

- Analyzed airline marketing campaigns and customer loyalty data using SQL and Python to evaluate acquisition, retention, campaign effectiveness, and customer lifetime value.
- Engineered customer-level KPIs including reward redemption rate, active months, flight frequency, and loyalty segmentation through data transformation and exploratory analysis.
- Built an interactive Power BI dashboard to visualize campaign performance, loyalty trends, and customer behavior, delivering insights to optimize marketing initiatives and improve customer engagement.

CERTIFICATIONS

- IBM Data Analysis with Python
- SQL (Advanced) - Hackerrank
- IBM Python for Data Science, AI & Development
